Enhanced Task Manager - Project Proposal

Project Name: Enhanced Task Manager
Document ID: PROJ-PROP-011
Version: 1.0

1. Background

Small teams often track their work in scattered spreadsheets and chats. The Enhanced Task Manager collects tasks in one place and automates the reporting work around them.

2. Goals

- Create, update and complete tasks with priorities and due dates
- Generate a monthly Word report automatically from a template
- Protect shared PDFs with a CONFIDENTIAL watermark
- Merge project documents into a single PDF

Enhanced Task Manager - Design

3. Architecture

A configuration-driven Document Agent reads a JSON file that lists the tasks to run. Each task type is dispatched to a handler:

- generate_word_report -> WordTasks
- apply_pdf_watermark -> PDFTasks
- merge_pdfs -> PDFTasks
- extract_word_text / extract_pdf_text

4. Audit Logging

Every task writes an entry (timestamp, status, message) to an audit report saved as JSON in documents/reports/.
